

Cast epoxy worktops are ideal where chemical resistance is the highest priority. Epoxy resin is durable, extremely chemical and stain resistant, and mechanically strong. It is highly resistant to many acids, solvents, and other inert chemicals.

In addition, because it is manufactured to have a seamless surface, it is easily cleaned and decontaminated. Typically, our clients choose epoxy lab worktops with a banded edge to contain spills.

Please see the Cast Epoxy Datasheet for more information on cast epoxy, including chemical resistances.

The worktops come in five colours: black, dark grey, cream, white, and grey.
